INTECH 2022: What awaits visitors

After a two-year break due to Corona, it's that time of year again: TRUMPF is opening its doors once more for the INTECH in-house exhibition in Ditzingen. From May 17 to 20, the high-tech company will present its entire range of manufacturing solutions for machine tools and laser technology. There is something for every customer.

— **Personal contact remains indispensable**

All is still quiet in the TRUMPF halls. TRUMPF employees are still doing some final programming on the machines, setting up sample parts and placing path markings. Everything should be perfect by tomorrow morning. The high-tech company welcomes visitors from all over the world for four days at its in-house exhibition. "For TRUMPF, INTECH is a great opportunity to demonstrate our leading position as a solution provider for the entire sheet metal process chain. Therefore, I am very pleased to show our solutions live to the guests again this year. Personal contact with our customers remains indispensable for TRUMPF," says Marcella Montelatici, responsible for Sales and Services at TRUMPF Machine Tools.

Marcella Montelatici, Managing Director at TRUMPF Machine Tools for Sales and Services:
"INTECH is a great opportunity for TRUMPF to demonstrate our leading position as a solution provider for the entire sheet metal process chain."

—— **TRUMPF expects 1800 visitors from 33 countries**

TRUMPF expects a total of about 1,600 visitors during the four days of the trade show. 33 nationalities from around the world will be represented, including Brazil, Egypt, Saudi Arabia and Tunisia. Only from Asia no guests will come due to the partly still hard Corona quarantine rules there. Approximately 670 TRUMPF employees will be on duty for the entire duration of the event. Visitors can expect to find a total of 61 solutions for sheet metal production in the Customer Center (CC), the Laser Application Center (LAC) and the AM showroom.
