3D printing technology (additive manufacturing) allows for the production of complex parts that were previously difficult to manufacture.

TRUMPF
TruPrint 3000

The TruPrint 3000 is a high-precision 3D printer that can produce parts with a resolution of up to 100 micrometers. It is ideal for producing small series of parts and prototypes. The printer uses a laser to sinter a powder bed, creating a solid part layer by layer. This process is highly accurate and allows for the production of complex internal structures.

GROHE is a leading manufacturer of bathroom fixtures and has been using 3D printing for many years. The company has invested in TRUMPF's TruPrint 3000 to improve its production process. The printer allows GROHE to produce complex parts that were previously difficult to manufacture. This has resulted in shorter lead times and lower costs. GROHE is a leading manufacturer of bathroom fixtures and has been using 3D printing for many years.

"GROHE Icon 3D printing technology allows us to produce complex parts that were previously difficult to manufacture. This has resulted in shorter lead times and lower costs. The printer is highly accurate and allows for the production of complex internal structures."

TruPrint 3000

TruPrint 3000 — это высокопроизводительная 3D-печать, которая позволяет создавать детали сложной геометрии. Благодаря своей компактности и высокой скорости печати, она идеально подходит для использования в Job Shops.

[Zum Produkt](#)

С помощью TruPrint 3000 от TRUMPF вы можете производить детали с высокой точностью и скоростью. Это делает ее идеальным решением для Job Shops, где требуется быстрое производство прототипов и мелких партий деталей.
